

The Viacom Data API allows users to consume a rich set of content metadata over the web to help power interactive experiences for any connected web or mobile application. This allows text-based lookups of series and episode data across all Viacom brands including Comedy Central, Nickelodeon and MTV, and returns descriptive metadata such as title, description, season and other related content items.

What can you do with this API?

You can create a digital viewing guide, a trivia game, or... wherever your imagination takes you!

Getting Started

The first thing you need is the developer key that authorizes you to make calls to the Viacom Data API service. No worries though, for YHack, we set up the below developer key which you should use when making calls to the Viacom Data API.

Developer key:	vT4Aq18ANEmQFPZI4jxFpJFypuGrwmVK
-----------------------	----------------------------------

Documentation on how to use the Viacom Data API can be accessed
<https://drive.google.com/file/d/0BxFD11GSSgwxN3hoeEdfUGtEUkk/view?usp=sharing>

Please note:

The Viacom Data API is currently in alpha and features Entertainment branded content only such as Comedy Central, South Park, Spike and more. Please be aware of the following:

- Some series and episode records may have blank titles and descriptions fields. We recommend filtering these out of your responses.
- Some series records may not have any episodes linked to them; and some series and episodes may not have URLs or app links. If your concept depends on them you may want to also filter these results from your responses within your code.

Office Hours

Have questions, need some help? Come speak to us in person during office hours!

Friday, October 31	10pm - 12am
Saturday, November 1	10am - 12pm & 5pm - 7pm
Sunday, November 2	4am - 6am
